

Use the Gateway Command Line Interface (CLI)

CTERA Edge Filers include a command line interface (CLI), with a rich set of commands that can be accessed from the user interface to perform actions not directly available in the GUI.

Step-by-step guide

To access the gateway CLI interface:

1. Log in to the gateway user interface as an administrator.
2. Select any option under **System** in the navigation menu (for example **System > Network**).
3. In the address bar of your browser, delete the string that appears after the final ":" (for example, *network* if you clicked **Network** in the previous step) and type *cli* in its place.
4. Press **Enter**.

The CLI Execution page is displayed.
